Customer Support Ticket Priority Prediction

Project Title

Customer Support Ticket Priority Prediction and Automated Assignment System Using Agentforce

Problem Statement

Customer support teams receive a large number of tickets daily, but prioritization and assignment are often manual. This leads to delays in resolving critical issues and poor customer satisfaction.

There is a need for a system that:

- Automatically classifies ticket priority
- Assigns tickets to the right support agent
- Reduces response time
- Uses AI to understand urgency

User Stories

1. **As a Support Agent**, I want tickets to be automatically prioritized so that I can focus on critical issues first.
2. **As a Customer**, I want urgent issues to be resolved quickly so that my experience improves.
3. **As a Manager**, I want tickets to be assigned automatically to the right team so that workload is balanced.
4. **As an AI Agent (Agentforce)**, I want to analyze ticket details and trigger automation so that manual work is reduced.

Expected Outcome

- Faster ticket resolution
- Improved customer satisfaction
- Reduced manual effort
- Intelligent ticket handling
- Better team productivity

Custom Object

Object Name:
Support Ticket Intelligence

API Name:
Support_Ticket_Intelligence__c

Fields

Field Label	API Name	Data Type	Description
Ticket Number	Ticket_Number__c	Auto Number	TKT-{0000}
Customer	Customer__c	Lookup (Account)	Related Account
Contact	Contact__c	Lookup (Contact)	Customer contact
Issue Type	Issue_Type__c	Picklist	Technical, Billing, General
Description	Description__c	Long Text Area	Issue details
Priority Level	Priority_Level__c	Picklist	Low, Medium, High
Status	Status__c	Picklist	New, In Progress, Resolved
Created Date	Created_Date__c	Date	Ticket date
Assigned To	Assigned_To__c	Lookup (User)	Support agent
SLA Breach Risk	SLA_Breach_Risk__c	Checkbox	Risk flag
Resolution Time (hrs)	Resolution_Time__c	Number	Time taken

Auto-Launched Flow Logic (Modified for this Project)

1. Flow Type

Auto-Launched Flow (No Trigger or called from Agentforce)

2. Variables

Input Variable

Label	API Name	Type	Input
Account Name	varAccountName	Text	Yes

Output Variables

Label	API Name	Type	Output
Account Id	varAccountId	Text	Yes
Ticket Id	varTicketId	Text	Yes
Priority Level	varPriorityLevel	Text	Yes
Assigned Agent	varAssignedTo	Text	Yes
Action Message	varActionMessage	Text	Yes

3. Step-by-Step Flow Implementation

Step 1: Get Account

Element: Get Records

- Label: Get Account
- Object: Account
- Condition:
    - Name Equals {!varAccountName}
- Sort: CreatedDate DESC
- Store: Only first record

Step 2: Assignment (Store Account Id)

Element: Assignment

- Label: Store Account Id

Set:

- varAccountId = {!Get_Account.Id}

Step 3: Get Ticket Record

Element: Get Records

- Label: Get Ticket
- Object: Support_Ticket_Intelligence__c
- Condition:
    - Customer__c Equals {!varAccountId}
- Sort: CreatedDate DESC
- Store: Only first record

Step 4: Assignment (Store Ticket Id)

Element: Assignment

- Label: Store Ticket Id

Set:

- varTicketId = {!Get_Ticket.Id}

Step 5: Decision (Analyze Description)

Element: Decision

- Label: Analyze Description

Outcomes:

High Priority

- Description contains:
    - "urgent"
    - "not working"
    - "failure"

(Use multiple conditions with CONTAINS)

Medium Priority

- Description contains:
    - "issue"
    - "slow"
    - "delay"

Default Outcome

- Low Priority

Step 6: Assignment (Set Priority Level)

High Path

- varPriorityLevel = "High"

Medium Path

- varPriorityLevel = "Medium"

Low Path

- varPriorityLevel = "Low"

Step 7: Decision (High Priority Check)

Element: Decision

- Label: Is High Priority

Condition:

- varPriorityLevel Equals "High"

Step 8: Create Task (Only High Priority)

Element: Create Records

- Object: Task

Set Fields:

- Subject = "Urgent Ticket Handling"
- WhatId = {!varTicketId}
- Priority = High
- Status = Not Started

Step 9: Assignment (Assign Agent Name)

Element: Assignment

- Label: Set Assigned Agent

Set:

- varAssignedTo = "Senior Support Agent"

Step 10: Optional SLA Check

Decision: SLA Risk

Condition example:

- If Created Date older than 2 days

Then:

- (Optional internal flag or message)

Step 11: Final Output Message

Element: Assignment

- Label: Set Final Message

Set varActionMessage:

- High:

  "High priority ticket detected. Assigned to senior agent."
- Medium:

  "Ticket marked as medium priority. Will be handled shortly."
- Low:

  "Tickets are low priority and queued for processing."

Step 12 : Save Flow

Label Name : Support_Ticket_Intellegence

Active Flow

4. Final Flow Structure

Start

→ Get Account

→ Assignment (Account Id)

→ Get Ticket

→ Assignment (Ticket Id)

→ Decision (Analyze Description)

→ Assignment (Priority Level)

→ Decision (High Priority)

→ Create Task

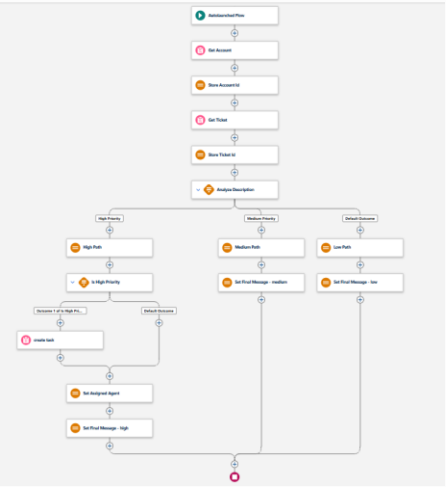

→ Assignment (Assigned Agent)

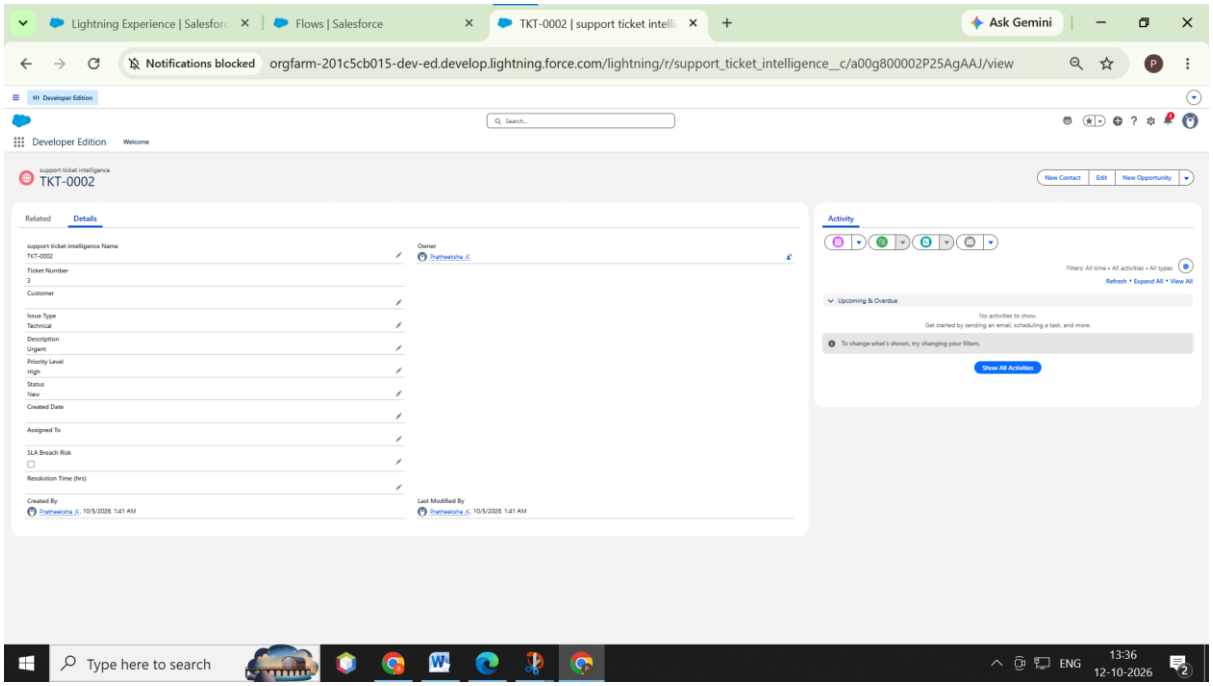

→ Optional SLA Decision

→ Assignment (Final Message)

→ End

Flow OutPut :

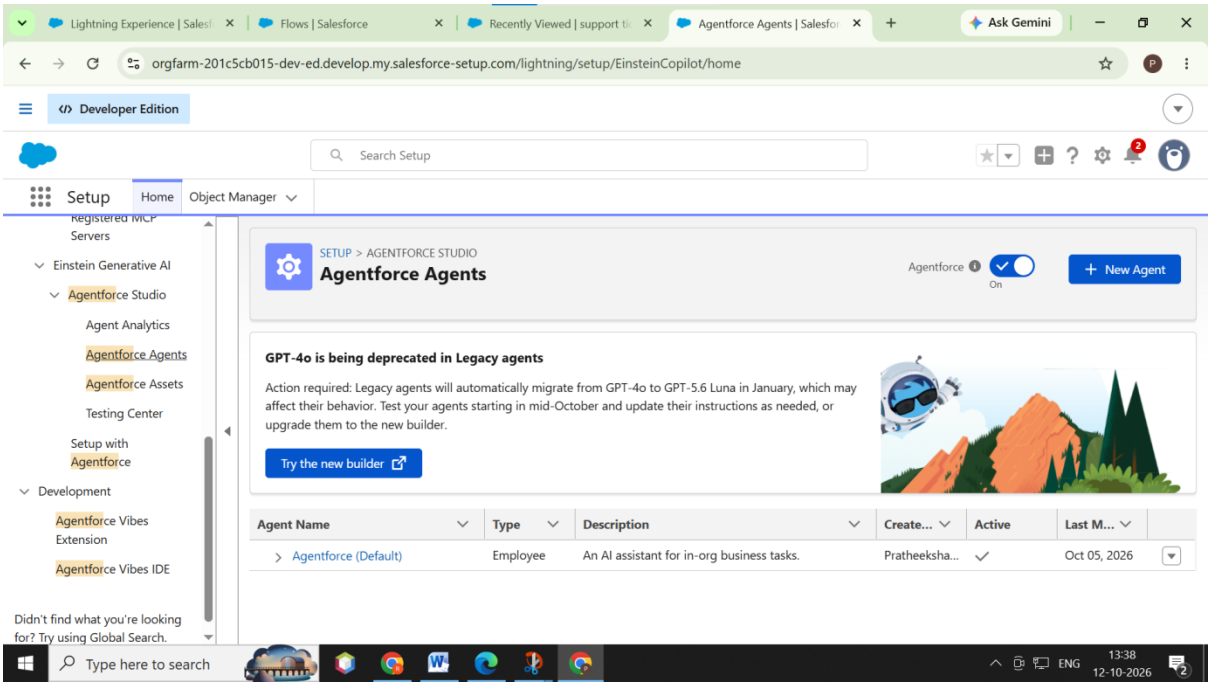

5. Final Outcome

- Takes **Account Name as input**
- Fetches latest support ticket
- Analyzes description using keywords
- Sets priority automatically
- Creates task for urgent cases
- Returns output to Agentforce

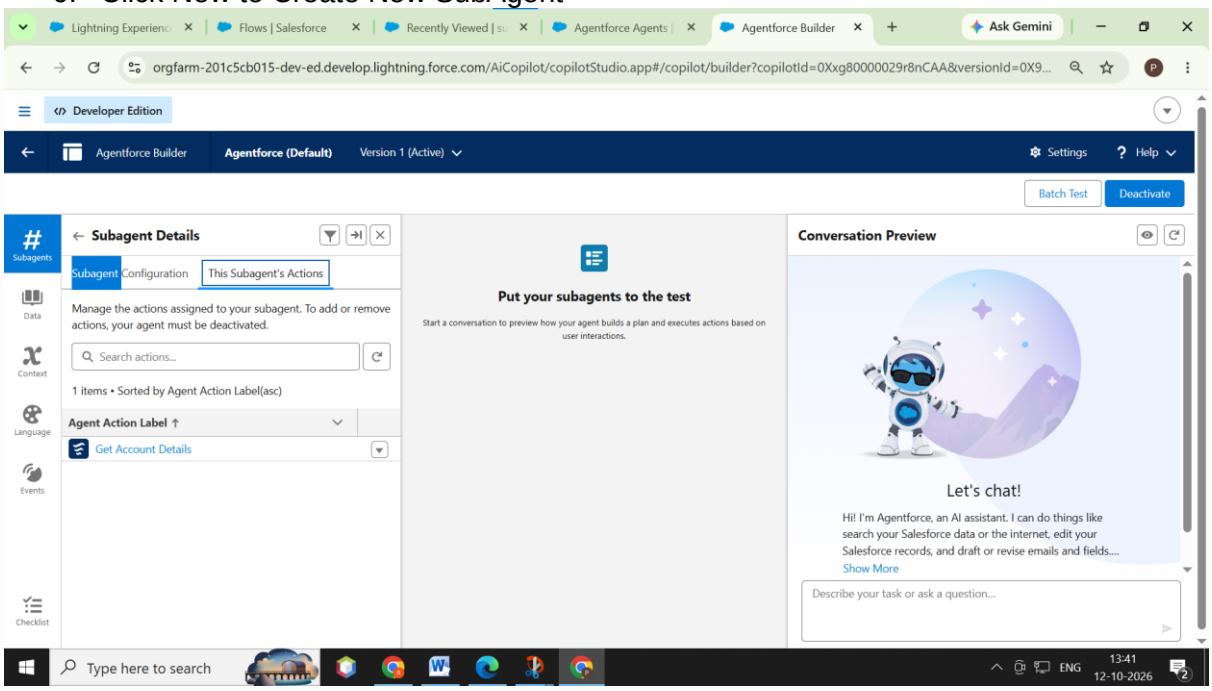

Agentforce Configuration

Steps :

1. Go to Gear icon and Click Salesforce Go
2. Search Default and Select Agentforce Default then Enabled It
3. Select Get Started ⇒ Turn On ⇒ Confirm
4. Search Agents in Quick Find Box and Enabled The Agent then you will see Default Agent
5. Select Default Agent and Click Open in Builder

6. Click New to Create New SubAgent

7.Click Next

Agentforce Subagent Configuration

Name

Support Ticket Priority Analysis

API Name

Support_Ticket_Priority_Analysis

Classification Description

This topic analyzes customer support tickets to determine priority based on issue description and urgency. It handles user requests related to ticket status, issue severity, and support prioritization.

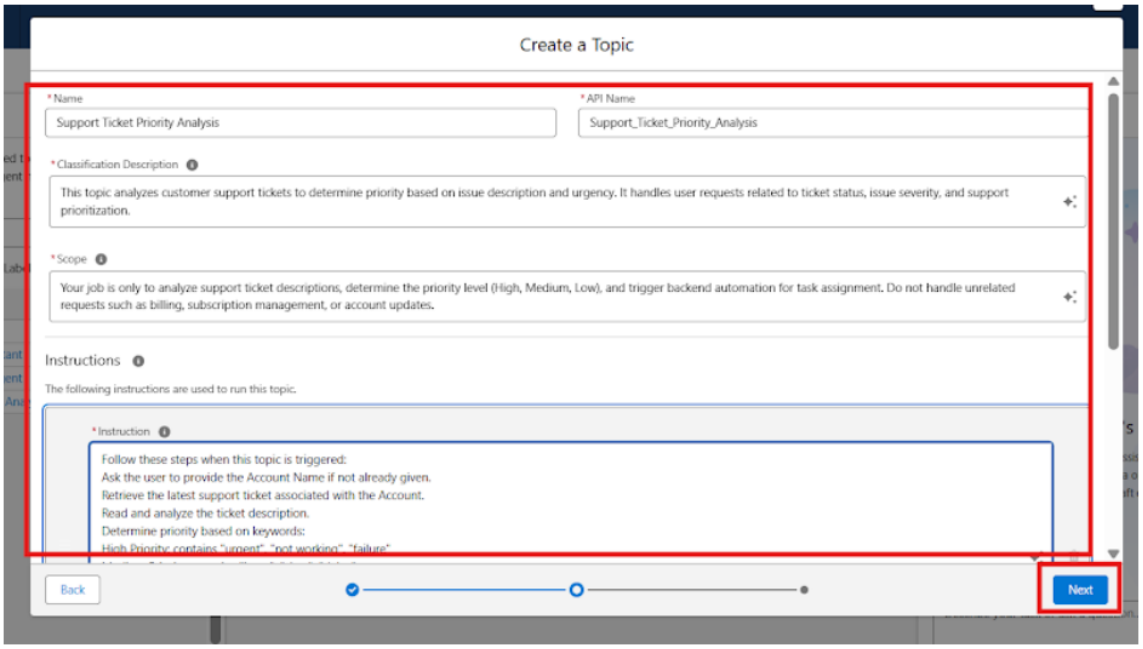

Scope

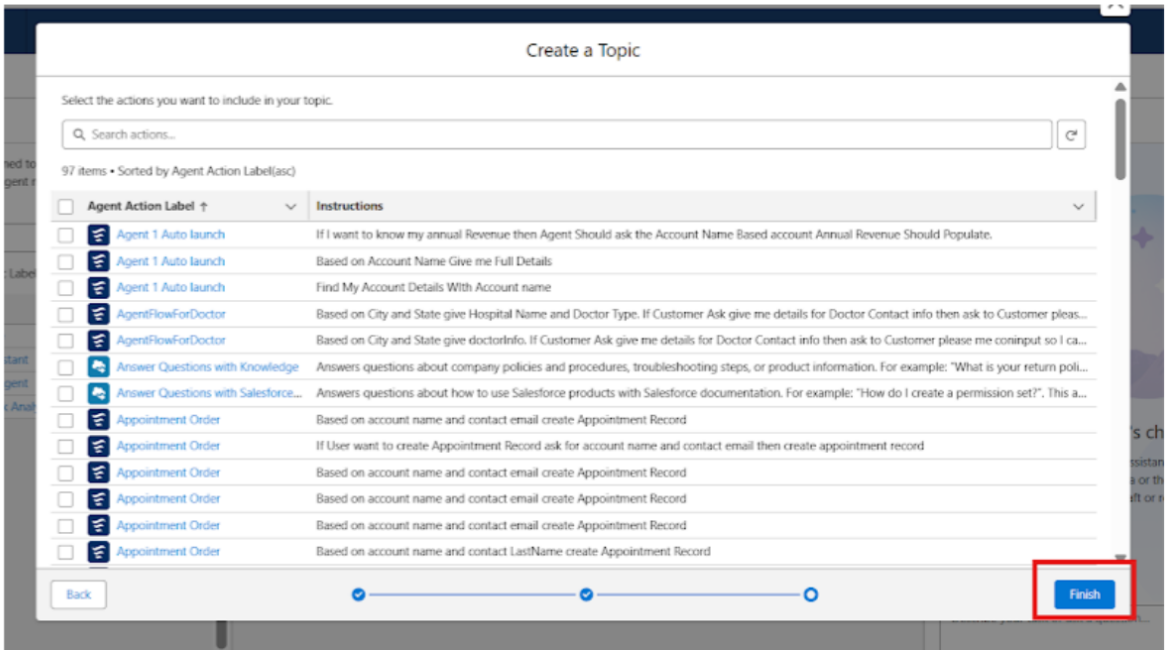

Your job is only to analyze support ticket descriptions, determine the priority level (High, Medium, Low), and trigger backend automation for task assignment. Do not handle unrelated requests such as billing, subscription management, or account updates.

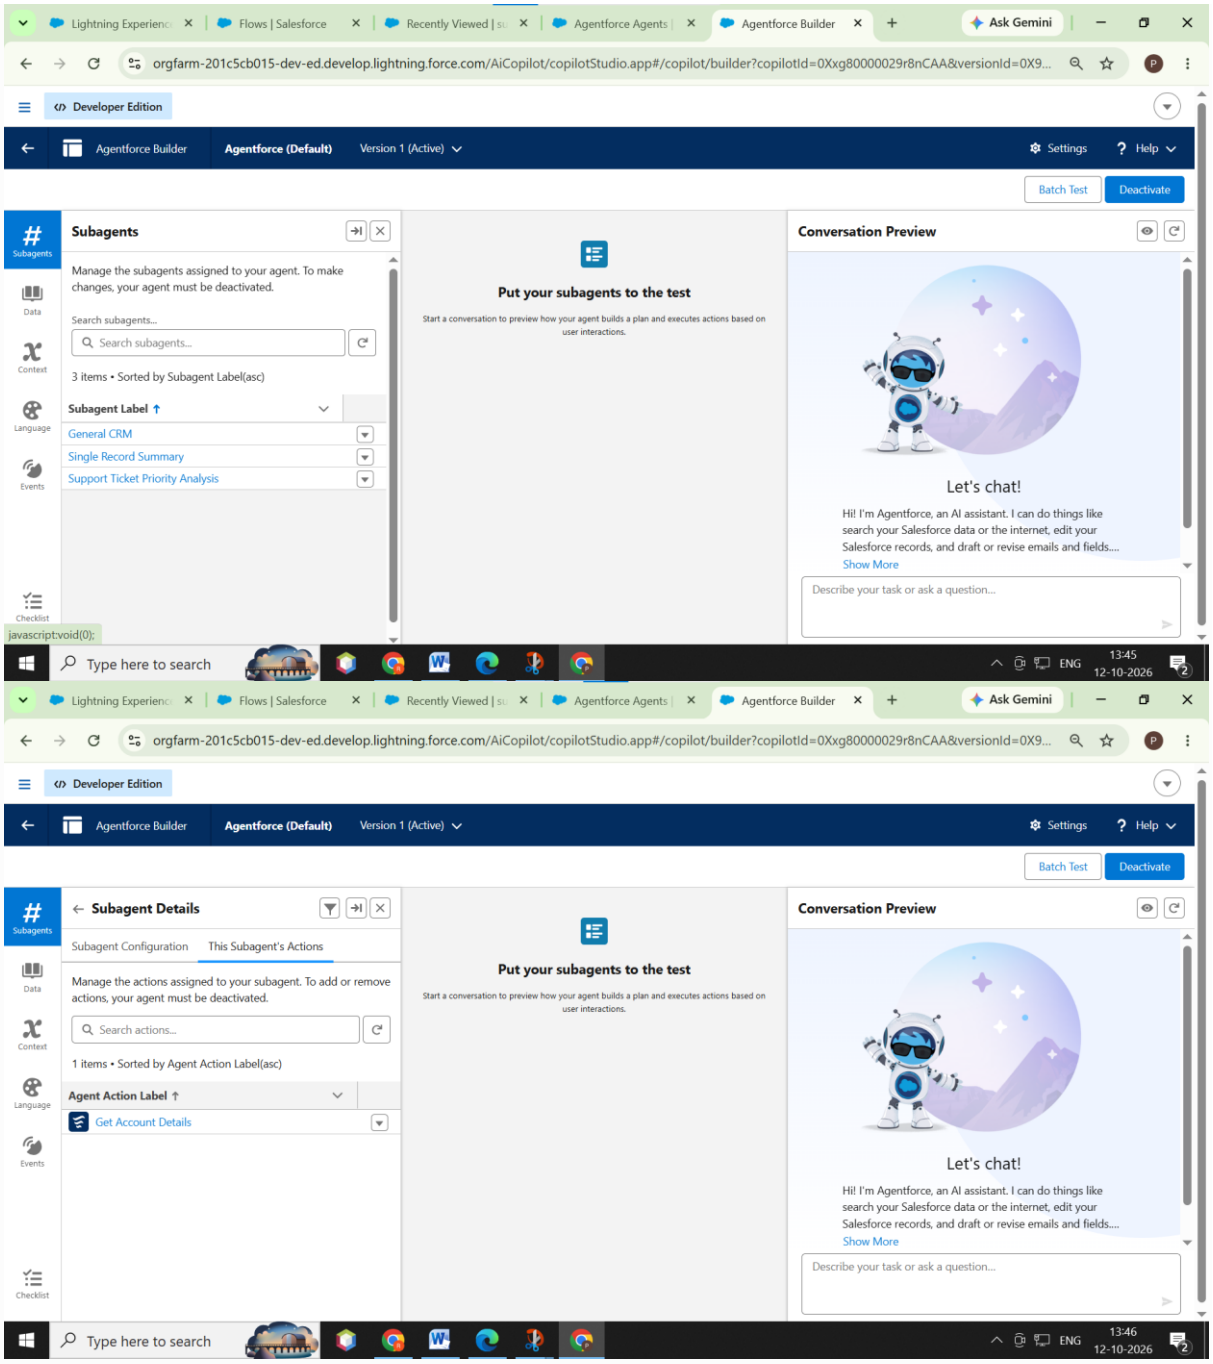

Instructions

Follow these steps when this topic is triggered:

1. Ask the user to provide the Account Name if not already given.
2. Retrieve the latest support ticket associated with the Account.
3. Read and analyze the ticket description.
4. Determine priority based on keywords:
    - High Priority: contains "urgent", "not working", "failure"
    - Medium Priority: contains "issue", "slow", "delay"
    - Low Priority: if none of the above
5. Set the priority level accordingly.
6. If the ticket is High Priority:
    - Trigger the Auto-Launched Flow
    - Ensure a task is created for immediate handling
7. Assign the ticket to the appropriate support level (e.g., senior agent for high priority).
8. Return a clear response message to the user:
    - High → Inform urgent handling is initiated
    - Medium → Inform issue will be handled shortly
    - Low → Inform ticket is queued
9. Do not update records directly or send emails. Use Flow for all actions.

Analyzing ticket details and determining priority...

Input

varAccountName

- **Description**
  Enter the customer account name to fetch the latest support ticket and analyze its priority.
- **Data Type**
  lightning__textType
- **Require Input**
  Enabled
- **Collect Data From User**
  Enabled

Outputs

varAccountId

- **Description**
  Returns the unique identifier of the customer account used to retrieve the support ticket.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varActionMessage

- **Description**
  Displays the final message indicating ticket priority and actions taken by the system.
- **Data Type**
  lightning__textType
- **Show in Conversation**
  Enabled
- **Output Rendering**
  Text

varAssignedTo

- **Description**
  Indicates the support agent or team assigned to handle the ticket.
- **Data Type**
